Know me as Adam

XIV: ORVER ET AUT

Adam Marshall Dobrin

IT, SQL, Python ... "magic words" ... and "up to Earth" insight.

Los Angeles, California

Summary

I have worked for over two decades in the computer industry; in development, system and database administration, and have a sincere and deep lust for science and new technologies. Recently I've begun writing about a "hidden" yet very tangible relationship between computer technology and religion, focusing on verifying proof of this connection both in ancient mythology and in the manifestation of these ideas in modern research and development in the names and works of modern companies.

I have a passion for the ethos and beneficence of open source technology; and believe that the transparent and open collaboration shining through this movement is a key component in the drive to see the light of a fusion of social processes and technology that has the ability to bring us into a new era of prosperity.

Experience

Ministry of Forbidden Knowledge

It's passed ... "down to you" ... just kidding.

April 2012 - Present (8 years)

Coasta Mesa, CA

I write about a fusion of ancient myth and popular culture that yields the beginning of a narrative about turning Hell into Heaven. It focuses on technologies both hidden and in plain sight, and a message which describes how we can use this things to build the better world that we all deserve, and hope for.

This message comes to us from "on high" and describes in detail a number of modern social problems which are currently being adversely effected by these very same technologies. With only a bit of thought, it's clear to see that what we see around us is a sort of "primer" in just what not to do--somewhere between "conditioning" and "teaching," we are being prepared to be the

salvation of the Universe--the end of secrecy, and control--we are together the light of day.
